bunq
Amsterdam, NL

Madam, Sir,

I am writing to express my strong interest in the Data Engineer position with *bunq*. As an engineer with more than 5 years of experience coding and project development, I believe I can add value to your team and help your organization accomplish its goals.

I've always been interested in the development of data pipelines and ETLs and would love to contribute to your current NLP projects for *bunq's* customer's satisfaction and building loyalty.

I have a thorough understanding of data structures and algorithms. I am knowledgeable of backend development best practices, testing and deployment and a proven track record of proper documentation for future maintenance and upgrades.

I have a solid foundation in Python web development frameworks and advanced proficiencies in building Rest APIs and optimizing databases. In addition to 5 years work experience, I hold a Bachelor in Computer Science and a Master's degree in Artificial Intelligence and I've spent my last two years in university doing Natural Language Processing, Data Science and Machine Learning which makes me comfortable in data preprocessing, finding efficient features in data and implementing/designing Machine Learning Algorithms.

My excellent attention to details and quest for perfection allow me to produce quality code that requires less debugging. I pair excellent technical knowledge with collaboration and communication to ensure I support my teammates while producing high-quality work.

I'm grateful that you've taken the time to consider me for the position. Please contact me if you have questions or want to discuss my candidacy further. I'm positive I can help *bunq* strive for greatness.

Sincerely,
Saïd Ziani.
